JUMP CAREY EARLY DEVELOPMENT

GERMII SABRE CASE STUDY

Australia’s first Early Learning Centre deploying Australian made, award-winning technology to improve health and wellbeing of children and staff

Utilising the power of the sun, not chemicals.
At Jump, we pride ourselves on providing the very best in health and hygiene standards. By incorporating the use of the GERMii Sabre UV-C sterilising unit to our cleaning protocols we have added an extra, chemical-free layer of protection against the exposure to germs and bacteria in our service.

We are always looking for ways to go the extra mile for our children and families. GERMii has enabled us to do this.

GERMii Australia is proud to be supporting customers across all sectors including early learning centres.
THE CHALLENGE JUMP IS NOW ABLE TO SOLVE

Staff are now able to sterilise items and surfaces that couldn’t previously be done, including

- Plush toys, books, games, electronics, fabrics, pillows and blankets
  The team are able to do this now in seconds
- using light, rather than harsh chemicals and antivirals
- This saves significant amounts of time and money
- Many of these items are virtually impossible to be able to treat before now

BENEFITS FOR OUR CHILDREN AND STAFF

- At Jump, your children and staff are now exposed to far fewer chemicals thanks to GERMii
- We know that chemicals and antivirals can have adverse effects on people, such as increasing a child’s risk of developing respiratory issues, such as asthma
- We also recognised that many surfaces such as fabric, paper and electronics couldn’t or shouldn’t be treated with chemicals
- Staff are now also able to sterilise surfaces faster, meaning we have more time to spend with children
- Risk of infection is now significantly lowered, with more surfaces able to be treated
- This has wonderful benefits against everyday challenges such as gastro, influenza and hand and foot
- The result is healthier children and staff going home to parents, grandparents and friends
Our latest GERMii tool in the fight against pathogens and bacteria at the centre, is the GERMii UV-C autoclave chamber. These chambers are currently in use today with Royal Flying Doctors West Australia.

Using these light chambers, we can stack almost any item into the chamber, and within 2 minutes, every item is completely sterilised without the use of any chemicals whatsoever. This includes toys, blankets, books, electronics.

It allows us to reduce the amount of wash and dry cycles, further reducing the number of detergents, electricity and hours required. In terms of staff time, it’s also freeing up our staff to focus on the children under our care.

Jump is a loving, nurturing community that fosters a life-long love of learning from an early age. We’re proud to be at the forefront of innovation, and supporting an Australian company that is making a genuine difference.

GERMii is proudly Australian and we design patented light technology that’s manufactured right here in Australia.

Our products eliminate not only viruses and bacteria prominent in childcare centres, but COVID-19 as well. Chemical free.
